COMPUTING - PUPIL VOICE

Year 1	It was tricky to use the mouse at first. I played Simple City and grew plants. I like using the mouse and getting better at it. I have to click with each side of the mouse.
Year 2	I loved designing, making and sharing our sprite on Scratch with the different things I made it do. Scratch is really fun, I have been able to move my sprite about and change the background. I love computing because you can make different characters on Scratch. We can do coding on Scratch to help us create games and different programs. I can use Scratch and Scratch Junior. I like playing scratch and making the cat move. It's really fun. I liked taking photos on the iPad. We were superheroes and then we had to change the photos.
Year 3	I loved Scratch because I designed a character and told it what to do! I liked it when we were on the computing and we did 'Debugging with Laurel' I have learnt about online safety. We used a program called 'Forms' to create a survey.
Year 4	I loved designing, making and sharing our sprite on Scratch with the different things I made it do. Scratch is really fun, I have been able to move my sprite about and change the background. I loved making an educational programme. We learnt about inputs and outputs. I am good at computing because I started coding at home. I like helping my class on Scratch when they get stuck with their animations or simulating their toy ideas. I enjoyed creating a toy simulation and working out how to get my character to move to an object (the muffin).
Year 5	I liked teaching computing as it was hard to explain. I love computing! I even teach it sometimes! Just want more Scratch game work. I loved making a 'safety first' website for younger children.
Year 6	We enjoyed using the computers to design and build a museum. We also learnt how to use coding to invent a game for different age ranges. I think our knowledge of computer safety is good now. I love creating programs using different software. I have enjoyed working in a pair to design my own adventure game. Computing gives me a chance to show my technical skills which I can use to improve my latest projects. I like getting to make PowerPoints and brochures. I developed my design skills to make something that looked good. I liked using the computers to research Guatemala. We could find out different information which we used when making our brochures.
